

Effective Tools for Low-Grade Thermal Energy Storage and Utilization

Call for Papers: Journal of Advanced Thermal Science Research

Low-grade thermal energy, such as industrial waste heat, geothermal energy, and solar thermal energy, has the potential to be a valuable resource in contributing to energy conservation and improving energy efficiency.

Unfortunately, much of this energy remains untapped, leading to increased environmental pollution without any benefits to production processes.

To address this issue, the Journal of Advanced Thermal Science Research is pleased to announce a special issue on Low-grade Thermal Energy Storage and Utilization. The aim of this special issue is to provide a platform for developing effective tools for low-grade thermal energy storage and utilization in the energy field.

We invite researchers and practitioners to submit their original and innovative research articles, case studies, and reviews.

All submitted papers will undergo rigorous review by our panel of expert reviewers as we are committed to ensuring high-quality peer-review and publication standards.

Don't miss this opportunity to share your work and contribute to the advancement of low-grade thermal energy storage and utilization. Submit your paper today and be a part of this exciting special issue.
